Membrane	Firestone PondGard™ EPDM 1.0 mm
Surface	12,200 m ²
Installation	2016-2017
Depth	0.6 to 2.0 m
Length	± 800 m

Sberbank is the largest banking institution in Russia and Eastern Europe. The main event in the bank's corporate life in 2016 was the opening of a new complex of the Corporate University meeting the most up-to-date standards of leading business schools around the world. The University is located in a picturesque area close to Moscow.

The landscape project was developed by well-known designers. The main idea was to integrate the ornamental ponds, streams and waterfalls into the natural landscape. There were very strict requirements for waterproofing materials as very heavy boulders and stones were placed on top of the membrane.
