MICRONET

Knitted frost & microclimate fabric

Micronet is a premium knitted frost control fabric. Micronet can help to protect plants from rain, hail, frost and bird damage.

Micronet knitted frost fabric creates a microclimate which can help to promote better plant growth by increasing temperatures during the winter months. Micronet should not be in direct contact with plants or crops, it is recommended to fix onto wires using Polyclips or onto a timber frame using Cosio nail plates or timber battens. Micronet is knitted so will resist fraying, and is best cut with scissors. Micronet has an approximate shade factor of 15%.

Applications

- Frost protection
- Cloche frames
- Light hail protection
- Protection against birds / pests
- Crop covers

Specifications

- Roll size - 2m x 10m, 2m x 50m, 4m x 50m
- Colour - natural / opaque
- Weight - 80gsm, UV stabilised HDPE
- Warranty 5 year pro-rata warranty against UV degradation.

Micronet can be sewn into custom widths and lengths. Ropes, Eyelets, webbing or hem & draw-cords can be added.
